Să se determine coeficienţii şi gradul polinomului necunoscut *B*, precum şi varianţa λ_w^2 în funcţie de polinoamele *A*, *C* şi varianţele λ_e^2, λ_v^2, prin echivalarea celor două modele, în cazul *na=nc=1*. Este modelul rezultat unic determinat?

☝ **Examen:**

Generalizaţi rezultatul pentru valori arbitrare ale indicilor structurali *na* şi *nc*.
